ABOUT ME

I am a versatile professional working at the intersection of game design, software development, and project management. I specialize in creative technologies, gamification, and immersive experiences (VR/AR), adapting quickly to different roles and contexts. My approach combines technical precision with creative thinking to deliver impactful solutions across industries. During my work, I have also had the opportunity to contribute to machine learning and computer vision projects, applying these technologies to practical, real-world applications.

WORK EXPERIENCE

Spici S.R.L. – Napoli, Italy

Project manager

[01/2025 – Current]

I currently serve as Project Manager for the Gaming Lab within the *Casa delle Tecnologie Emergenti* project in Naples. In this role, I led the setup of the lab, managed the project team, and now coordinate ongoing activities, including organizing meetings with potential clients and visitors interested in exploring and utilizing the lab's services.

Among the projects I am actively involved in is VETEREA, part of the Italian PNRR program, focused on the development of a digital twin of the city of Santa Maria Capua Vetere. The project includes the development of two mobile applications and a back-office platform, featuring AI-based components to enhance the visit experience of archaeological sites. Within this project, I oversaw all stages of development, conducted stakeholder analysis and engagement, supported reporting and administrative tracking, and coordinated public-facing events.

Additionally, I carried out technology scouting activities for the Municipality of Naples, producing technical documentation for the design of a digital platform aimed at connecting film production companies with the city administration to facilitate public space occupation for filming. This work led to the development of a proof of concept using the Odoo framework.

Game Designer | Software Engineer

[08/01/2024 – Current]

As both a game designer and software engineer, I have been actively involved in the creation of gamification platforms, advergames, and interactive experiences for the cultural and creative industries, with a strong focus on gaming and immersive storytelling.

One of the key projects I worked on is Zeronetto, a gamification platform developed for a startup, designed to let children create their own interactive stories in the style of Light Novels. For this project, I used Unity for the interactive front-end and Odoo for backend content and user management.

As part of another project, I worked on a machine learning and computer vision solution for clothing recognition. I developed a model capable of identifying clothing items from images and automatically assigning labels, integrating the system into the client's management software to support product classification and content organization.

I also developed two digital games used in the context of educational events and training sessions, both built in Unity and tailored for short, high-engagement play sessions. These games supported real-time interaction and were designed to stimulate creativity and collaboration among participants.

In addition to game design and development, I regularly take on tasks such as workflow organization, client communication, documentation, and team coordination. I am also actively engaged in the development of immersive environments in Virtual Reality (VR) and Augmented Reality (AR), and I am currently working on the design and prototyping of a tabletop game.

Additionally, I have experience as an instructor, having taught a Virtual Reality Design course at [GESCO Formazione](#), where I delivered lectures on Software Engineering. I also conducted a seminar at Federico II University, presenting the game development process.

ITS BACT

Professor in Gamification & Design

[06/2025 – 07/2025]

Gamification & Design - for the academy in "Tourism & Art Game Design and Digital Developing"

An applied training course focused on designing engaging and inclusive experiences through game mechanics, motivational frameworks, and digital tools.

Topics included: game loops, user motivation, design thinking, gamification frameworks (MDA, HEXAD, Octalysis), storytelling, accessibility, and technology for cultural and tourism innovation.

Final Project: development and presentation of a complete gamification strategy for a real-world cultural experience.

 **ZURU Tech** – Modena, Italy

Junior C++ Software Engineer

[10/2022 – 12/2023]

After completing my Master's in Game Development, I began an internship at Zuru, where I developed the MiniBim project—an early prototype of the Dreamcatcher product—using Unreal Engine 5.1, C++, and custom components created by Zuru. Following my internship, I continued working at Zuru as a developer and designer.

 **Storm Reply** – Torino, Italy

Consultant

[09/2020 – 09/2022]

I had the opportunity to manage a small team while working on a project for the Delhaize Group. In addition to handling service providers and providing daily support, I was responsible for monitoring, infrastructure maintenance, and system administration operations. I also developed and modified scripts for process automation, utilized AWS services, and worked on a frontend application using Vue.js, as well as infrastructure development with Terraform.

Moreover, I managed their IT platform, overseeing system integrations, coordinating with stakeholders to gather and analyze requirements, and ensuring the alignment of IT solutions with business needs. I created technical documentation, tracked project progress, and facilitated communication between technical and non-technical teams, contributing to process optimization and the smooth delivery of IT services.

EDUCATION AND TRAINING

Game Design

Digital Bros Academy [11/2023 – 06/2024]

Country: Italy

An intensive and practice-oriented course focused on the principles of game design. Topics included gameplay systems, level design, narrative structures, player experience, prototyping, and production pipelines.

UI/UX Design

Digital Bros Academy [03/2023 – 07/2023]

Country: Italy

User research and analysis, feature design, creation of wireframes, functional prototypes, and mockups. Organization and analysis for playtesting sessions. UI/UX design best practices.

First-level Master's Program in Computer Game Development

University of Verona [11/2021 – 05/2023]

Programming Courses: C++, Advanced C++, High-level, Mobile, Network, Tools, Sound

Game Development Courses: Graphics, Advanced Graphics, Game Engine, Elements of Game Production, Physics, Artificial Intelligence, Human Computer Interaction

Master's Degree in Computer Science: Software Engineering and IT Management

University of Salerno [26/03/2020]

Final grade: 110 cum laude | **Thesis:** Identification of attacks on the can-bus through temporal features and machine-learning techniques in the automotive field

Software Project Management Course

University of Salerno [2018]

The course covered all areas of PMBOK® Guide v.6

Degree in Computer Science

University of Salerno [26/10/2017]

Thesis: Design of MicroAppEngine for iOS: Component Isolation and Extensibility

Trinity College London

[06/2009]

Graded Examination in Spoken English, Grade 6 (B1.2 of the CEFR)

PROJECTS

Personal Project and Works Over the years, I have consistently pursued personal and collaborative projects beyond academic and professional settings, driven by curiosity and a passion for continuous learning. These experiences allowed me to explore a wide range of technologies—including C++, C#, Java, JavaScript, Python, Unreal Engine, and Unity—while strengthening my problem-solving skills and technical versatility.

JOB-RELATED SKILLS

Job-related skills

Knowledge and Methodologies

Software Engineering, Design Patterns, Object-Oriented Programming
Project Management with Agile and Scrum methodologies
UX/UI Design, Human-Computer Interaction, Game Design, Gamification

Programming & Markup Languages

C++, C#, C, Java, Python, SQL, JavaScript, TypeScript, HTML5, CSS,
Flutter, Vue.js, React, Angular, Blueprints, Terraform, Spring Boot

Development Environments & Tools

- IDEs: Visual Studio, Android Studio
- Game Engines: Unity, Unreal Engine
- Design Tools: Adobe Photoshop, Figma, Balsamiq Mockups, Voxel
- Project & Team Collaboration: Notion, Microsoft Project, Jira, Confluence, Miro
- Version Control & Code Collaboration: Git
- Prompt Engineering for Generative AI
- MachineLearning & Computer Vision: Tensorflow, PyTorch, OpenCV, Pandas, NumPy
- Containerization & Cloud: Docker, AWS, Azure

Databases & ERP Platforms

MySQL, MongoDB, Odoo

Operating Systems

Windows, Linux, macOS

COMMUNICATION AND INTERPERSONAL SKILLS

Communication and interpersonal skills

Through my diverse experiences across corporate, academic, and creative environments, I have developed strong communication skills, both in team settings and in client-facing roles. I regularly coordinate with stakeholders, lead interdisciplinary teams, deliver public presentations, and conduct training sessions. My ability to translate complex technical concepts into accessible language has proven valuable in facilitating collaboration between developers, designers, and non-technical partners.

ORGANISATIONAL SKILLS

Organisational skills

I have managed projects in various domains—from cultural innovation to digital transformation—taking care of team workflows, stakeholder relations, lab setups, and public event planning. My organizational approach is structured yet flexible, allowing me to adapt quickly to changing priorities. I have experience in managing full project cycles, reporting, and coordinating both on-site and remote teams, ensuring high-quality and timely outcomes.

I authorize the use of my personal data in compliance with Legislative Decree 196/2003
